

Wilson James

<p>Company: Wilson James is a security company providing manned guarding & front of house services to customer's buildings.</p>	<p>Location: West Lothian, Scotland</p>
<p>Employees: 1500+</p>	<p>Sector: Security</p>
<p>Summary of activities Wilson James is not a manufacturer and the majority of our security staff work in our customer's buildings so our actions on reducing carbon emissions have focused on our making our vehicle fleet more co2 friendly (we can demonstrate a tangible reduction in emissions since we started measuring it). The other area of focus has been our head office where we have replaced old fans, electric and storage heaters with a modern and highly efficient air conditioning system. In addition we have changed over 600 old style light bulbs with new low energy tubes and in this area alone will reduce our carbon emissions by over 50%.</p>	
<p>Impacts and benefits As we migrate the vehicle fleet to smaller and more fuel efficient engines we expect to reduce overall running costs. We expect the improvements to the air conditioning system and move to more efficient lighting at our head office to deliver energy cost saving of 30% over the next three years.</p>	
<p>Plans for the future We are investigating what it would take for WJ to become Carbon neutral. We think we would be the first Security Company to achieve this.</p>
